\*This file describes version v0.1, last revised 2020/04/16.

# 1 Purpose of this package

This package is made for the HSR Studenten organization to provide an easy to use interface to give a more consistent look and feel for the works produced by its the members. A secondary objective of this package is to eliminate the *many* dispersed duplicate .tex files that fill the repositories of the HSR-Stud org.

## 2 Package Options

**dontrenew** Do not renew existing L<sup>A</sup>T<sub>E</sub>X commands and environments. This is useful when the package is loaded on a document that is already partiall written.

**arrowvec** Tells the package to use a vector notation with a small arrow over the variables, as it were handwritten.

**textvecdiff** Disables the “Nabla” or “Del” notation for vector derivatives. Instead the symbols  $\nabla, \nabla\cdot, \nabla\times, \nabla^2$  are be replaced with grad, div, curl and div grad.

## 3 Summary notation

## 4 Default Theming

### 4.1 Links with hyperref

Colors from [?] see  
<https://intranet.hsr.ch>

```
1 Colors from
2 \cite{bib:hsrcolors} see \
3 \url{https://intranet.hsr.ch}
```

### 4.2 Source Code with listings

```
1 int main(int argc, char *argv[], char *envp[]) {
2     std::cout << "hello world" << std::endl;
3 }
```

```
1 \begin{lstlisting}[language=C++]
2 int main(int argc, char *argv[], char *envp[]) {
3     std::cout << "hello world" << std::endl;
4 }
5 \end{lstlisting}
```

## 5 Mathematics

### 5.1 Vectors

**\vec, \v, \vc** Vectors notation. If the option **arrowvec** described in §2 is enabled, the notation with a small arrow over the varible will be used  $\vec{x}$ , otherwise the vector is bold **x**. Takes one option  $\langle letter \rangle$ . **\v** is renamed to **\vaccent** and **\vec** to **\oldvec**.

$$\mathbf{F} = m\mathbf{a}$$

```
1 \[ \vec{F} = m\vec{a} \]
```

**\uvec, \uv** Unit vector notation. Takes  $\langle letter \rangle$ . It is implemented in terms of **\vec**, which means that the style is inherited.

$I = \int \mathbf{J} \cdot d\mathbf{s}$ $= \iint \mathbf{J} \cdot \hat{\mathbf{n}} dx dy$	<pre> 1 \begin{align*} 2   I &amp;= \int \vec{J} \cdot d\vec{s} \\ 3   &amp;= \iint \vec{J} \cdot \vec{n} dx dy \\ 4 \end{align*} </pre>
---	--

### 5.4.2 Classical

`\deriv` The derivative has arguments  $\{\langle function \rangle\}$ ,  $\{\langle var \rangle\}$  and the optional argument  $[\langle order \rangle]$ .

$\frac{dy}{dx} \quad \frac{d^3y}{dx^3}$	<pre> 1 \[ 2   \deriv{y}{x} \quad \quad \quad 3   \deriv[3]{y}{x} 4 \] </pre>
---	---

`\pderiv` The partial derivative has arguments  $\{\langle function \rangle\}$ ,  $\{\langle var \rangle\}$  and the optional argument  $[\langle order \rangle]$ .

$\frac{\partial y}{\partial x} \quad \frac{\partial^3 y}{\partial x^3}$	<pre> 1 \[ 2   \pderiv{y}{x} \quad \quad \quad 3   \pderiv[3]{y}{x} 4 \] </pre>
---	---

### 5.4.3 Vector

`\grad` The gradient operator.

$\nabla f$	<pre> 1 \[ \grad f \] </pre>
------------	------------------------------

`\div` The divergence operator, `\div` is renamed to `\divsymb`.

$\nabla \cdot f$	<pre> 1 \[ \div f \] </pre>
------------------	-----------------------------

`\curl` The curl operator.

$\nabla \times f$	<pre> 1 \[ \curl f \] </pre>
-------------------	------------------------------

`\laplace` The laplace operator.

$\nabla^2 f$	<pre> 1 \[ \laplace f \] </pre>
--------------	---------------------------------
